

Project 4 - Diffusion Models

Part 0 Setup

Prompts to DeepFloyd IF Model, Random Seed Used (180)

Stage I (low-res) and **Stage II**'s (high-res) Num_Iterations were changed as follows (Stage I x II)

20x20

40x10

10x40

(1) 'an oil painting of a snowy mountain village'

(2) 'a man wearing a hat'

(3) 'a rocket ship'

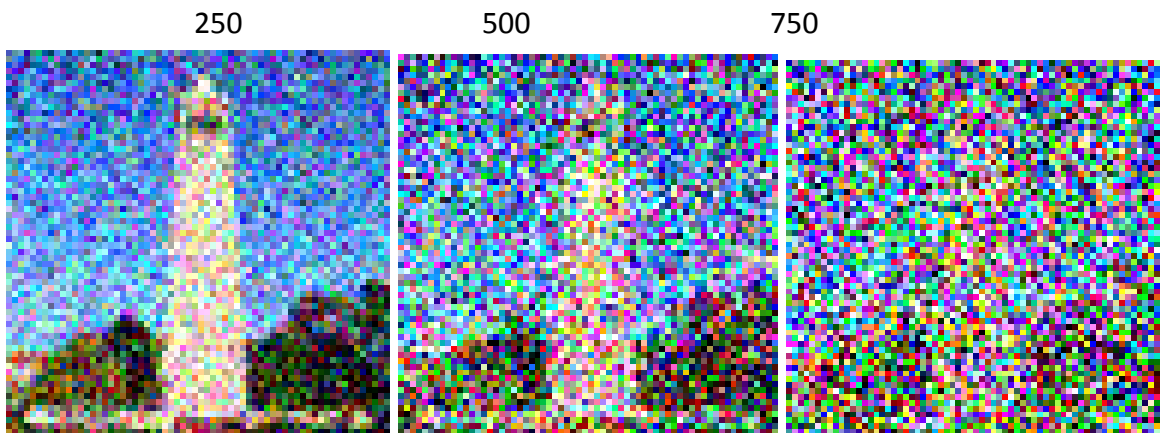

Stage II demonstrates a much higher performance boost when increased from 20 -> 40, The computational cost also increases because Stage II is the high-resolution (texture, edges, lighting) stage compared to the low-result Stage I (structure, object location, object-pose).

Overall I would recommend increasing the iterations of Stage II while slightly decreasing the iterations of Stage I for high-quality images.

Part 1

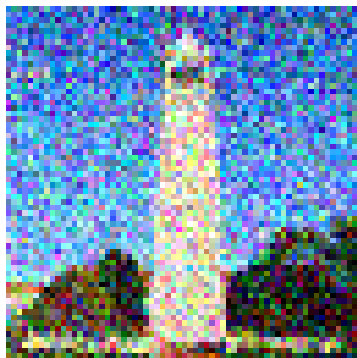

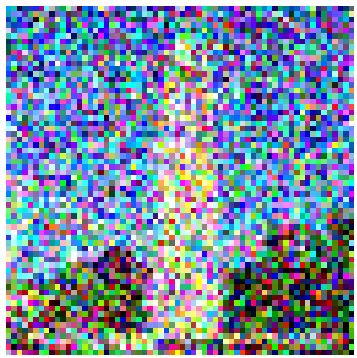

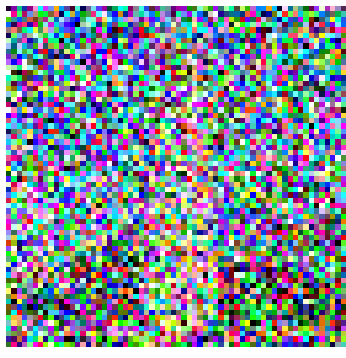

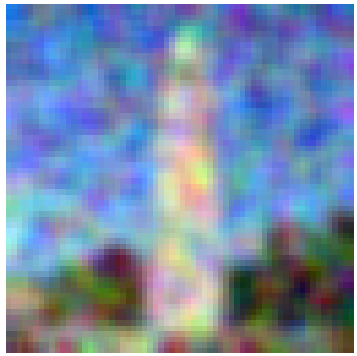

1.1 Noisy Test Images

Noise added by the forward process

1.2 Gaussian Blur

Gaussian added in second row

250	500	750
		
		

1.3 One Step Denoising with pretrained UNet

Reverse forward process

Original Noisy $t=250$ One-step Denoised

Original Noisy $t=500$ One-step Denoised

Original Noisy $t=750$ One-step Denoised

1.4 Iterative Denoising

Step 0 Step 5 Step 10 Step 15 Step 20

Original Noisy $t=690$ Iterative Denoising One-Step Denoising Gaussian Blur

1.5 Diffusion Model Sampling

Sample 1 Sample 2 Sample 3 Sample 4 Sample 5

1.6 Classifier Free Guidance

CFG Sample 1 CFG Sample 2 CFG Sample 3 CFG Sample 4 CFG Sample 5

1.7 Image to Image Translation
